IMMUNIZATION
in Colorado Schools (Statewide), 2018-2019

Overview

Vaccines are a safe and effective way to prevent the spread of serious disease and keep children healthy as they grow. For each birth cohort vaccinated in the U.S. per the recommended schedule, vaccines save 33,000 lives, prevent 14 million cases of disease, and save $9.9 billion in direct healthcare costs.

All students and school staff deserve a healthy school environment that supports their wellbeing and builds a strong foundation for learning. It takes an entire community to protect against serious disease. Because diseases such as measles can spread rapidly, adequate vaccination coverage at the school level -- roughly 95% for each vaccine -- helps to protect the health of students, staff and others in the community, including those who cannot be vaccinated for medical reasons or because they are still too young to receive vaccines. This is known as herd immunity or community protection. With national measles cases reaching the highest number in nearly 30 years, it’s crucial that we take steps to protect students and community members from preventable disease.

Did You Know?

- **49th** Colorado ranks last among the 49 states that reported for kindergarten vaccination rates.
- **9,424** Colorado kids were hospitalized or went to an emergency room with vaccine-preventable diseases in 2017.
- **96%** of vaccine exemptions in Colorado are claimed for non-medical reasons.
- **28,874** K-12 students entered Colorado schools in 2017-18 without protection from one or more vaccines.

Why It Matters

- While the large majority of Colorado parents vaccinate, data show there is variation in vaccination coverage across the state. Areas of low vaccination put children -- especially young children -- and communities at risk for outbreaks, which can spread rapidly in school settings.
- State and local vaccination requirements for school entry are important tools for maintaining high vaccination coverage rates and, in turn, lower rates of dangerous and costly diseases.
- Research shows that states with lenient exemption policies, like Colorado, have higher exemption rates, which can lead to increased risk for vaccine-preventable disease outbreaks.
- Low vaccination rates can be an indicator that families may need help understanding which vaccines their children should have and/or where they can conveniently access free or low-cost vaccines. Research shows vaccine hesitancy is generally not a barrier to vaccination among refugee and immigrant students.
- Ensuring high vaccination rates will reduce absenteeism linked to preventable disease in support of the Every Student Succeeds Act (ESSA).
- Research shows that schools with higher vaccination rates are more likely to have a school nurse supporting immunization efforts.

Vaccination Reporting Policy

Per Colorado law and Board of Health Rule, all licensed schools and child care centers are required to report their immunization and exemption rate information annually to the Colorado Department of Public Health and Environment (CDPHE) to be made publicly available online.

To access the school immunization data, visit www.covaxrates.org.

County Level Rates of K-12 Children Fully Immunized with MMR (measles-mumps-rubella), 2018-19

This information can be viewed for each vaccine on the CDPHE school immunization data site.

Percentage of All Colorado Schools That Meet Healthy People 2020 Goals for Vaccination Coverage, 2018-19

<table>
<thead>
<tr>
<th>Vaccine/Disease</th>
<th>All K-12 Schools</th>
</tr>
</thead>
<tbody>
<tr>
<td>MMR (Measles, Mumps, Rubella)</td>
<td>51%</td>
</tr>
<tr>
<td>Varicella (Chickenpox)</td>
<td>39%</td>
</tr>
<tr>
<td>DTaP (Diphtheria, Tetanus, Pertussis)</td>
<td>58%</td>
</tr>
<tr>
<td>HepB (Hepatitis B)</td>
<td>51%</td>
</tr>
<tr>
<td>Polio</td>
<td>46%</td>
</tr>
<tr>
<td>*Tdap (Tetanus, Diphtheria, Pertussis)</td>
<td>47%</td>
</tr>
</tbody>
</table>

National Healthy People 2020 (HP 2020) goals are to reach 95% coverage for each vaccine (*except Tdap, which is 80%).
**IMMUNIZATION**
in Lone Star School District No. 101, 2018-2019

### How Is My District Doing??

Total school district enrollment: 124 students

- The percent of students in Lone Star School District fully immunized for each vaccine ranges from 75%-92% depending on the specific vaccine.
- Exemption rates for any vaccine range from 0.8%-2.4%.
- Depending on the vaccine, fewer than 10 students in Lone Star School District claimed an exemption.
- In Lone Star School District, 29 students have an incomplete or missing record for at least one vaccine.

### What Does This Mean for Our Schools?

Vaccination is important to emergency response efforts and helps to prevent absenteeism, exclusions, and other societal and economic costs.

In the event of an outbreak, your school may be required to take measures to protect the student population or community at-large, such as excluding students. These lost days of school have impacts on a student’s education and long-term success.

### Case in Point:

Recent Colorado and national cases and outbreaks of vaccine-preventable diseases like measles, mumps, influenza, hepatitis A, whooping cough and chickenpox highlight the importance of ensuring the children in Lone Star School District are fully immunized so that they, and the entire community around them, are protected from serious illness.

To explore your district’s data using online dashboards and to access related resources and references, visit [childrensimmunization.org](http://childrensimmunization.org)

<table>
<thead>
<tr>
<th>Disease/Vaccine</th>
<th>Fully Immunized</th>
</tr>
</thead>
<tbody>
<tr>
<td>Measles/MMR</td>
<td>86%</td>
</tr>
<tr>
<td>Mumps/MMR</td>
<td>86%</td>
</tr>
<tr>
<td>Rubella/MMR</td>
<td>86%</td>
</tr>
<tr>
<td>Pertussis (Whooping Cough)/DTaP</td>
<td>75%</td>
</tr>
<tr>
<td>Diphtheria/DTaP</td>
<td>75%</td>
