Overview

Vaccines are a safe and effective way to prevent the spread of serious disease and keep children healthy as they grow. For each birth cohort vaccinated in the U.S. per the recommended schedule, vaccines save 40,000 lives, prevent 20 million cases of disease, and save $17 billion in direct healthcare costs.

All students and child care staff deserve a healthy environment that supports their wellbeing and builds a strong foundation for early learning and development. It takes an entire community to protect against serious disease. Because diseases like measles and whooping cough can spread quickly, especially in child care settings, high vaccination rates are important to help protect the health of children, staff and others in the community — including those who cannot be vaccinated for medical reasons or babies still too young to receive vaccines. This is known as herd immunity, or community protection. Ensuring high vaccination coverage and compliance with child care vaccination policy is important not only for the health of children and staff, but also for emergency response efforts. High vaccination coverage also helps prevent societal and economic costs, absenteeism and exclusions. Now more than ever it is evident that a child’s care and education can be interrupted due to a public health crisis like disease outbreak. Vaccination can help avert these interruptions and protect children’s learning environments.

Why is Immunization Important During the COVID-19 Pandemic?

Vaccines, including the COVID-19 vaccine, are critical to protecting kids from dangerous diseases. Keeping children up to date with all recommended vaccines during the COVID-19 pandemic is critical protecting them from preventable illness. As with COVID-19, a case or outbreak of vaccine-preventable disease could force children to be excluded from child care and miss out on valuable learning, and could even force child care closures in some cases. Maintaining high vaccination rates can help to stop additional outbreaks of disease in our communities that could further overwhelm our healthcare systems.

Which Vaccines Are Required for Child Care and Pre-School Attendance?

<table>
<thead>
<tr>
<th>Vaccine</th>
<th>Requirement</th>
</tr>
</thead>
<tbody>
<tr>
<td>MMR (Measles, Mumps, Rubella)</td>
<td>Penumococcal</td>
</tr>
<tr>
<td>DTaP (Diphtheria, Tetanus, Pertussis)</td>
<td>HepB (Hepatitis B)</td>
</tr>
<tr>
<td>Inactivated poliovirus (Polio)</td>
<td>Varicella (Chicken Pox)</td>
</tr>
<tr>
<td>Hib (Haemophilus influenza type b)</td>
<td></td>
</tr>
</tbody>
</table>

Which Vaccines Are Also Recommended by the CDC?

- Rotavirus*
- Hepatitis A*
- Influenza (Flu)*

*While not required for child care or pre-school attendance, these vaccines are recommended by the CDC. Visit the CDC’s website to learn more about the vaccine schedule and the diseases that vaccines protect against.

Did You Know?

- **5,804** Colorado children under age five were hospitalized or visited an emergency department for vaccine-preventable diseases in 2019.*
- **$54 million** was charged by hospitals and emergency departments to treat children under five for vaccine-preventable diseases in 2019.*
- **57%** of Colorado kids hospitalized with vaccine-preventable disease are five years old or younger.*
- **97%** (approximately) of vaccine exemptions in Colorado are claimed for non-medical reasons.

Do Colorado Child Care Facilities have Complete Immunization Policies?

A recent analysis shows approximately 40% of child care centers in Colorado do not have a vaccination policy available on their website. Of those that do have a vaccination policy available, 62% are classified as incomplete, meaning that they lack information on one or more important components, including:

1. WHICH vaccines are required to comply with the center’s policy
2. WHEN immunization documentation is required to be shared with the center
3. HOW immunization records should be submitted to the center
4. The CONSEQUENCES of not complying with the policy
5. WHETHER any exemptions to vaccines are allowed

*Sourced from Colorado Hospital Association data.
How Is My County Doing?

Total county child care enrollment: 1653 students
- Personal belief exemption rates for any vaccine range from 0% - 14%. The median exemption rate for MMR is 0% and the median exemption rate for DTaP is 0%.
- Depending on the vaccine, between 0 and 7 students in Broomfield County claimed an exemption.
- Depending on the vaccine, between 0 and 2 students in Broomfield County have an incomplete or missing record.
- 20 facilities in Broomfield County have exemption rates under 2.5% and 7 have exemption rates higher than 2.5%, making them higher risk for disease outbreaks.

What We Can Do Together

- REMIND students, families and staff of the importance of on-time vaccination and child care vaccine requirements.
- BUILD RELATIONSHIPS between child care administrators, parents and local public health to meet state vaccination requirements.
- PARTNER with other stakeholders to identify opportunities to deliver and/or improve access to vaccines for students and staff.
- SEEK SUPPORT AND GUIDANCE from your local public health agency and CDPHE regarding communicable disease control protocol.
- STAY INFORMED of science-based immunization information, as well as what’s happening with vaccine coverage rates and outbreaks in your community and beyond. Vaccine-preventable disease can spread quickly across regions.
- ENCOURAGE families to provide accurate vaccination records rather than claim an exemption out of convenience. Assist families in locating their child’s immunization record.
- SUPPORT POLICIES that help families access vaccines and ensure appropriate funding for resources that support disease response efforts, such as the Colorado Immunization Information System (CIIS).

Why Is Reporting Immunization Rates Important?

If there is an outbreak of measles or whooping cough in a child care facility or pre-school, administrators need to know which children to exclude from attending child care to protect both the individual child, their classmates and child care staff.

Senate Bill 163, passed in 2020, was fully implemented in 2021 and changed the process for claiming a non-medical exemption. Visit our website to learn more.
